

Case Study: Coleshill School

Casio's latest 4K projector provides outstanding picture quality for students at The Colehill School

The Colehill School in Warwickshire transformed its main hall with Casio's brand new 4K Large Venue Series projector, installed by integration experts, CDEC.

The crystal clear sharpness and outstanding image resolution has enhanced the learning experience for both the 1,100 pupils and teachers alike. In addition to the Large Venue Series, Network Manager, Neil Bridson, also selected 25 of Casio's Core projectors to roll out across the school's classrooms and replace existing lamp-based projectors. The lamp-free element and five year warranty were both important factors when it came to the purchasing process and selection of Casio over its competitors.

He adds: *"After reading about Casio's industry leading low TCO, it made financial sense to make a bulk purchase and the lamp-free element really appealed as we'd only had*

traditional lamp-based projectors at the school previously. Now technicians no longer have to change lamps which not only means they have more time, but any additional spend on replacement bulbs is totally eliminated. Their five year warranty has also given us total peace of mind for any servicing that might be required in the coming months and reliability that the projectors won't encounter any technical issues during presentations."

Key features

- Lamp-free
- 4K UHD resolution
- 5,000 ANSI lumens
- 1.5 x optical zoom
- 2 x HDMI
- Quick start and stop
- 20,000 hour lifetime

 **LampFree**
CASIO Green Technology

The install was entirely seamless from start to finish, due to CDEC's involvement. The outstanding picture quality provided by the 4K resolution of the Large Venue Series has a huge impact on the image clarity and parents were highly impressed by the visuals during a recent school production of 'Charlie and the Chocolate Factory'. It is also used for fun and interactive Zumba aerobics during P.E. lessons, which have been a great success with students; sixth formers lead classes for the younger year group using online videos displayed in the hall.

“Casio projectors have totally transformed the way staff conduct their lessons now. The image resolution is so sharp and captures pupils’ attention from the moment the projector is turned on.”

Headteacher Ian Smith-Childs

Alex Carlton, Business Development Manager at CDEC says; *“As a Premier Partner to Casio UK, I attended a demonstration of the new Large Venue Series to discuss how Coleshill wanted to use it for their different assemblies and events. As The Coleshill School already had a legacy solution in place, we utilised some of the existing brackets, which was important from both a cost saving and aesthetic point of view. We wanted to cause minimal disruption to staff and students, so our engineers worked around the time schedule within the Hall, to make sure it was a smooth process for the school.”*

The main assembly hall where the Large Venue Series is located is also used for mock exams. A visualiser has been plugged into the projector enabling teachers to display results and walk pupils through the answers to provide a highly immersive and engaging learning environment. Headteacher Ian Smith-Childs, says; *“Casio projectors have totally transformed the way staff conduct their lessons now. The image resolution is so sharp and captures pupils’ attention from the moment the projector is turned on. Previously teachers had to wait quite a while for the projector to start up, but now there is no delay so lessons run much more efficiently.”*

The school’s IT department installed Casio’s Core projectors across 25 of its classrooms. This particular model is ideal for smaller spaces due to its brightness of up to 3,000 ANSI lumens and flexibility when being refitted to existing installations.

Neil is keen to roll out Casio’s Core projectors across all of the school’s 50 classrooms; *“Due to the popularity of this projector amongst staff and its outstanding total cost of ownership, as well as environmental credentials due to the Laser & LED hybrid light source, we wouldn’t opt for anything other than Casio now.”*
